Air Circuit Breakers

3WL Air Circuit Breakers/Non-Automatic Air Circuit Breakers up to 6300 A (AC), IEC

Introduction

Benefits

Low space requirements

The 3WL air circuit breakers require very little space. Size I devices (up to 2000 A) fit into a 400 mm wide switchgear panel. Size III devices (up to 6300 A) are the smallest of their kind. Size III devices with the construction width of 704mm, fit into an 800mm wide switchgear panel.

Modular design

The following components can be exchanged or retrofitted at a later stage to allow the circuit breaker to adapt to new changes in requirements:

- Auxiliary Releases
- Motorized Operating Mechanisms
- Electronic Trip Units
- Current Transformers
- Auxiliary Circuit Signaling Switches
- Automatic Reset Devices
- Interlocks
- Engagement Operating Mechanisms

The main contact elements can all be replaced in order to increase the endurance of the circuit breaker.

Retrofittable modules for Electronic Trip Units

Modularity is one of the main features of the new 3WL circuit breakers. Special LCDs, ground-fault modules, rating plugs and communication modules for the Electronic Trip Units are available for fast and easy retrofitting and adaptation to changing requirements.

Communication/measurement functions

The use of modern communication-capable circuit breakers opens up completely new possibilities in terms of start-up, parameterization, diagnostics, maintenance and operation. This allows many different ways of reducing costs and improving

¹⁾ For replacement in existing circuit breakers please specify the circuit breaker ID No. when ordering.
²⁾ With the rating plug selected, the maximum rated current $I_{n\max}$ of the circuit breaker must not be exceeded. The following applies $I_n \leq I_{n\max}$.

³⁾ For direct measurement of the ground-fault current, e.g. in the neutral point of the transformer, a 1,200 A/1 A current transformer, class 1, is required. The internal load of the 3WL circuit breaker is 0.11 Ω. If the ground-fault current is to be determined using the vectorial sum of the phases, a transformer must be installed in the neutral conductor.

An important prerequisite for computer-based order processing is that article numbers must be structured according to standardized criteria.

They are used as an unambiguous means of communication for various purposes:

- Offer processing
- Selection and configuration
- Order processing
- Orders
- Order confirmation
- Processing of products for storage
- Order processing in supply locations
- Supply and dispatch
- Reporting and planning
- Service and warranty

The standardized structure ensures that only one Article No. has to be administered for one device.

This saves time and effort during planning, configuring, ordering and in stock keeping, and consequently above all it saves costs.

The example opposite explains the various positions within an Article No.

Accessories: with first order (components are already mounted)

Example	3WL1 2 1 6 - 4 J G 3 1 - 1 F A 3 - Z F 0 2									
"-Z" with order code	Communications interface "Standard" + Breaker Status Sensor (BSS) + communication module COM15 for connection to PROFIBUS DP									

Additional accessory components can be ordered ready-mounted.

These supplements are identified by "-Z".

Even with additional components, one Article No. is sufficient.

Accessories: for retrofitting (components for subsequent fitting)

Example	3WL9 1 1 1 - 0 B A 2 1 - 0 A A 0									
Interlocking set for mechanical ON/OFF without lock										

Additional accessories which are not intended to be ready-mounted in the factory, such as spare parts for storage, can also be ordered separately from the circuit breaker.

Accessories for retrofitting are identified by the Article No. stem 3WL9.
